What is Asia?: Diversity and Continuity

"Asia" is an imagined concept. There is not now, nor has there ever been, a single key. The idea of one Asia — or often called "the Orient" — was the product of a Western audience in which the peoples and nations of Asia were perceived as fundamentally different from the peoples and nations of the Western world. The reality of Asia is the result of its diversity, with attention given to each region and each nation.

The Encyclopedia of Modern Asia is a broad, inclusive, overview of Asia:

• East Asia: China, Japan, Korea, Taiwan
• South Asia: India, Pakistan, Nepal, Bangladesh, Bhutan, Sri Lanka
• Central Asia: Afghanistan, Turkmenistan, Azerbaijan, Uzbekistan
• Southeast Asia: ASEAN, Malaysia, Singapore, Thailand, Indonesia
• West Asia: Iran, Iraq, Turkey

The Encyclopedia of Modern Asia is an essential tool for anyone interested in understanding the world of the past. It is the essential tool for understanding the world of the present and the future as well.

The Asian Century

The Asian Century: Asia -- 30 percent of the world's surface and 60 percent of its population -- demands a new orientation for the global political scene, as Asia contains the world's most populous nations -- China and India -- and 60 percent of its population -- demands a new orientation for the global political scene, as Asia contains the world's most populous nations.

The reality of Asia is that the peoples and nations of Asia were perceived as "Asia" is an imagined concept. There is not now, nor was, a single authoritative exposition on Asia been relevant. The number of the world's largest growing economies are in Asia -- China, India. The continued growth of China and India in the present century, together with the rapid strides of all the other nations of the region, will witness to the reality of Asia.

The Encyclopedia of World History is now included in all high school and college curriculum and requires the study of non-Western history and cultures, and interest in Asian studies is growing. Global communications allow for regular readings and extensive cross-references. The Encyclopedia of World History is a valuable resource for understanding the new world order and the emerging world of the twenty-first century.

What is Asia? Diverse and Continuity

Asia is an imagined concept. There is not now, nor has there been, a single key. The idea of Asia -- often called "the Orient" -- was the product of a Western worldview in which the peoples and nations of Asia were perceived as fundamentally different from the peoples and nations of the Western world. The reality of Asia is the new context. As a result, the Encyclopedia of World History emphasizes diversity, with attention given to each region and each nation.

The Encyclopedia of World History set, including 6 volumes, is:

• World Asia (Iraq, Turkey)
• South Asia Afghanistan, Pakistan
• Central Asia: Aghanistan, Kyrgyzstan, Tajikistan, Turkmenistan, Uzbekistan
• East Asia China, Singapore, Japan, Hong Kong, Taiwan, South Korea, Taiwan
• Southeast Asia: Brazil, Cambodia, Laos, Thailand, Vietnam, Malaysia, Indonesia, Thailand, Singapore, Philippines

Any and all of the Encyclopedia of World History articles emphasized regional continuity -- such as Buddhism and Islam and wet and rice agriculture. It also looks at the growing presence of Western culture -- or Americanization -- as evidenced by the popularity of U.S. films and music and the growing use of the English language. There, too, is the challenge of anti-Americanism and the growing appeal of Americanism. The Encyclopedia is the essential tool for understanding the new world order and the growing appeal it has inspired.
